April 2019

PROJECTS

Quiz App: An android-based application which shows quizzes uploaded by the instructor.

Simple Chat App: A UI based Chat Application in which different users can create accounts and chat with each other. The sockets established a connection between different users.

My Restaurant: A web-based app which allows the user to order food from a restaurant. The restaurant updates their menu daily and when the customer selects its dishes, it generates a slip for the customer.

Mini Search Engine: This is a mini search engine, in which the user searches for the movies and in return, different details of movies were provided to it.

System Call in Linux: A user defined system call which prints a specific text to the screen when called.

Fruits Classification: A Machine Learning Project which differentiate between different fruits. Two neural networks were used in classifying the fruits: Artificial Neural Networks and Convolutional Neural Networks.

ADDITIONAL EXPERIENCE

Logistics Head, Event Management Committee

- Organized the Annual Event of Namal, 10th Anniversary of Namal Institute.

2018

Teacher, Namal Social Service Impact

- Teach the local students of Namal area. Most of the students were from 12th grade.
- Organize a session with the heads of NSSI for grooming of students.
